

CODEplus and Systar Launch Postal Activity Monitoring Solution Real-time Insight to Improve Operational Performance

ST. CLOUD, France and Vienna, VA, September 29, 2009 - Systar (ISIN: FR0000052854-SAR), a leading provider of performance management software, today announced a new Postal Activity Monitoring solution.

During the 13th international postal technology exhibition and conference - PostExpo 2009 - partners CODE Plus, Inc. (CODEplus) and Systar announced the launch of STARplus™, a new Postal Activity Monitoring solution that combines Systar's proven Business Activity Monitoring (BAM) platform and best practices along with CODEplus' two decades of experience in postal operations and unparalleled expertise in developing technologies for postal logistics, all within a single product.

During tough economic times, the demand for reducing cost and improving operational performance quickly and significantly creates strong pressure on executive and line management. However, cutting costs in the short-term without a clear and detailed understanding of what drives the value within the organization and with its customers can decrease long-term competitiveness.

Advanced, industry-specific BAM solutions, like STARplus, leverage operational, financial, and other key indicators in identifying what drives value in the respective sector and then provide the facts necessary to make informed decisions.

STARplus is specially designed to provide the real-time monitoring and analyses of postal processes and workflows that enable stakeholders to anticipate risks, improve efficiency and uncover revenue opportunities. It gathers data from across postal technologies and silos and transforms it into actionable information in order to reduce costs and improve operational performance.

"Knowing how the business is performing at any given time relative to strategic objectives is key to achieving optimal business agility," states Bertrand Bouhour, President of Systar, Inc.

With STARplus, postal operators gain unmatched visibility into the postal supply chain – from collection and retail to delivery – so they can make continual improvements and informed decisions. Each postal area has access to real-time dashboards tailored to various categories of end-users that provide operational awareness of key postal activities, alerts to important postal situations and insight into potential issues that impact their business decisions.

"What differentiates STARplus from other analytical applications is the operational intelligence brought by the real-time dashboard and the inherent understanding of what drives value in the postal sector: the key business drivers and the critical systems aligned in support of the core mission - moving the mail," said Jinan AbouShakra, President and Chief Executing Officer of CODEplus.
